About Us

Solar-Man is a family owned and operated South Australian business. We have been assisting our valued customers since 2005, designing and installing state-of-the-art solar and battery solutions.

Our personal customer service, coupled with access to the latest range of reputable brands, assures you that our system recommendations will deliver your energy needs reliably and cost-effectively.

Solar-Man specialises in both ON-GRID and OFF-GRID solar power generation, including energy saving battery storage solutions.

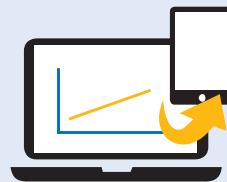

Your system will be personally designed, installed and maintained by a leading solar specialist – fully accredited and certified by the Clean Energy Council. Our team of highly experienced professionals service all areas of the state and we have proven experience to design and deliver complex installations. Rest assured, we hold a Builder's Supervisor License – your guarantee of qualified expertise and management throughout your entire project.

6 KEY REASONS TO TRUST SOLAR-MAN WITH YOUR SOLAR/BATTERY SOLUTION

Peace of mind – Solar-Man is both a Clean Energy Council Approved Solar Retailer and Accredited Installer

Free monitoring and diagnosis for the life of your system

Direct consultation with an accredited solar designer and installer – not a salesperson or commission-driven, phone representative

High quality, reliable solar panels, batteries and component equipment from industry-leading manufacturers

Technical advice and ongoing after-sales support – we want you to understand your system's capability

Every Solar-Man Solar System is built to industry 'best practice' standards – we guarantee it!

Panels are the ‘engine’ of your power system. It’s simple – poor quality solar panels generate less energy.

Reliably high yields are only possible using top of the range technology.

Whilst we have access to many different panels, our recommendation is REC Heterojunction solar panels (HIT).

We recommend them because they have over 25 years experience and many patented features that others can not match. REC (HIT) panels deliver more energy per square meter, for longer, than any other panels on the market AND they are backed by a comprehensive 25 year durability warranty.

Whilst we will always advise to use the best panels available we understand that on occasions this may not suit your budget. Please be aware budget panels will not give the same energy yields as REC (HIT) Solar Panels or last as long.

Stand-alone (off-grid) power

Where connection to the electricity grid is problematic – distance to connect or even cost of connection is prohibitive – being totally independent from power bills, an off-grid system might be the solution for you.

Off-grid or Stand-Alone Power Systems offer a choice of high-tech equipment to provide you with a seamless energy supply of similar or better quality than the grid. The components within an Off-Grid system include solar panels, control system, batteries, inverter and a genset for back up.

Make an obligation-free time to visit our site at Inman Valley and see our off-grid solar system – it is a lot easier to understand when you see an operating system in action.

A standard home with solar will usually use approximately 25-30% of the energy generated for self-consumption.

The same home, with the addition of a battery storage system, can achieve levels of 80-90% self-consumption. As such, the home with the installed solar energy solution including battery has the capability to significantly reduce energy purchases from the grid and increases their opportunity to save on grid energy costs.

Solar-Man is an approved supplier and installer of most battery storage systems – including Tesla, Senec, Sonnen, BYD and Soltaro.

Inverters

Just like solar panels, inverters can vary in quality and Solar-Man will only recommend quality inverters. Put simply, solar panels are the engine of a home energy system – the inverter is the power converter. Poor equipment equals poor conversion (energy loss).

Solar-Man is a Fronius Service and Solutions Partner, SMA PowerUP Partner and Enphase Silver Installer.

Monitoring & support

Some inverters provide you with the ability to monitor your solar array and they will even report faults should one occur.

We offer FREE monitoring of these systems for the life of the system.

In the unlikely event something is not performing as required, we can fault-find, order parts and be on-site to fix the issue without you having the concern of what to do.

Energy production, consumption, charging and discharging information is all accessible with monitoring so you can utilise your energy more efficiently. It gives you piece-of-mind, knowing your system is working exactly as we designed it.

COMMERCIAL

By taking advantage of open roof space or land, you can generate your own solar energy and reduce your monthly energy bill.

Making your business investment count is paramount – superior performance begins with superior technologies.

Solar-Man systems are built to deliver optimum energy output – the more sunlight that solar panels can capture, the more they convert into clean, efficient energy. We design environmentally responsible solar energy systems that will deliver the optimum energy for your financial investment.

What type of solar installation is right for your business?

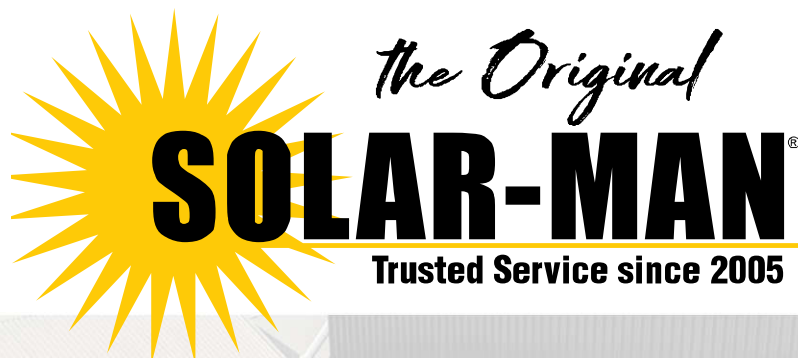

Using our experience, we will examine your company's facilities to determine the optimum solution. As discussed in this brochure, we manage and streamline the entire process – from the initial evaluation and cost analysis, to construction and maintenance.

Low interest 'green loans' for your solar.

To assist you to purchase any of our quality, long-life solutions we are able to offer low-interest 'green loans' on our entire range of equipment, with manageable terms of up to 10 years.

There are no hidden fees or charges.

ALL YOU NEED DO NOW IS CALL US – OBLIGATION FREE...

“No hype, just good advice.”
